The doctor(s) and staff at Calhan Veterinary Clinic wish to provide the best care possible for your pet. Part of this care includes monitoring the function of your pet's vital organs prior to administering any anesthetic agent, as well as administering pain medication. Our doctor feels that pre-anesthetic testing is necessary for your pet's safety. Testing of the kidney and liver function, as well as hydration status, lets us know how well your pet will process the anesthetic agents we give him/her. Our doctor also feels strongly that pain management will better help your pet recover from surgery. We will be performing these procedures on your pet so that we can optimize the care we give your pet. These procedures are included in the estimate our doctor has provided you and include the following tests: Complete Blood Count (CBC) and Comprehensive Chemistry Profile. **Would you like our staff to discuss the benefits of these tests: YES _____ NO _____.**

My pet has had the following medications in the last week: _____
